Flush Mount Floor Register Installation Instructions

BEFORE INSTALLING
We recommend consulting a professional if you are unfamiliar with installing hardware fixtures. Signature Hardware accepts no liability for any damage to the home, or personal injury during installation.

Observe all local building codes.

Unpack and inspect the register for damage. If damage is found, contact our Customer Relations team at 1-866-855-2284.

INSTALLATION
1. Position the flush mount frame over the duct opening, allowing even spacing on all four sides.

2. Drill a 5/64" pilot hole inside the recessed area of the frame at an angle down into the sub-floor.

IMPORTANT INFORMATION
All of Signature Hardware's registers are listed on our website by air duct size, which is the industry standard. To determine which register size to order, remove the old register and measure the air duct opening.

For standard floor registers, the louver frame fits into the air duct opening in the floor, and the lip rests on the surface of the floor.

These instructions assume that the register is being installed into an unfinished floor.

TOOLS AND MATERIALS:

- Drill
- Hammer
- 6" Finishing Nail
- Nail Set
- Safety Glasses

Flush Mount Floor Register Installation Instructions 1
3. Carefully making sure that the frame has not shifted, use a #6 finishing nail to attach the one corner of the register to the sub-floor. Use a nail set to drive the finishing nail into the recessed wood. Avoid using a hammer, which can damage the wood.

4. Repeat step 3 on each corner so that you have two nails per side inside the frame, securing the register to the sub-floor.

5. Cut and fit your 3/4” wood flooring to flush to all sides of the frame.

6. Insert vent cover into the frame.
